

TickerTape

The TickerTape tool can be accessed through the More Tools menu button. The TickerTape tool allows you to create and show text messages that scroll across your display over your presentation. **Tickertapes** can be created, edited, saved as files and reused.

When you select this tool, a new, default **Tickertape** message scrolls across the display. You can use the **"Tickertape Edit"** window to enter your message and change its properties. Use the **Tickertape File Menu** to save and load your **tickertapes**.
